

FRANSCHHOEK CLIENT FEEDS BACK TO THE GRID

Our client, a Franschhoek resident, is very satisfied with his 7kwp system installed by Winelands Solar two weeks ago. A bio-directional meter was fitted to allow him to feed back more or less 30kw to the grid on a daily basis (depending on the sun). He now generates his own electricity during the day as well as a portion of the family's evening consumption. We installed a solar water geyser to take care of their hot water requirements.

This responsible family have started their journey to independency and are very happy with their investment. As per the client: "I would like to compliment Pieter of Winelands Solar with the way he handled the whole contract and also compliment him on his patience with the municipality. Pieter has represented your company with professionalism not often seen in this contract world".
